Do You know WHAT'S In A UACCINE?

ammonium sulfate (salt)

Suspected gastrointestinal, liver, nerve and respiratory system poison.

beta-propiolactone

Known to cause cancer. Suspected gastrointestinal, liver, respiratory, skin and sense organ poison.

genetically modified yeast; animal, bacterial & viral DNA

Can be incorporated into the recipient's DNA and cause unknown genetic mutations.

latex rubber

Can cause life-threatening allergic reactions.

monosodium glutamate

(MSG)/glutamate/glutamic acid

Being studied for mutagenic, teratogenic (developmental malformation and monstrosities) and reproductive effects. A neurotoxin. Allergic reactions can range from mild to severe.*

aluminum

Implicated as a cause of brain damage; suspected factor in Alzheimer's disease, dementia, seizures and comas. Allergic reactions can occur on skin.*

formaldehyde (formalin)

Major constituent of embalming fluid; poisonous if ingested. Probable carcinogen; suspected gastrointestinal, liver, immune system, nerve, reproductive system and respiratory poison. Linked to leukemia, brain, colon and lymphatic cancer.

micro-organisms

Live and killed viri and bacteria or their toxins.

The polio vaccine was contaminated with a monkey virus now turning up in human bone, lung-lining (mesothelioma), brain tumors and lymphomas.

* When babies are hours or days old it is impossible to know if they have an allergy.

polysorbate 80

Known to cause cancer in animals.

tri(n)butylphosphate

Suspected kidney and nerve poison.

glutaraldehyde

Poisonous if ingested. Causes birth defects in experimental animals.

■ gelatin

Produced from selected pieces of calf and cattle skins, de-mineralized cattle bones and pork skin. Allergic reactions have been reported.*

gentamicin sulfate & polymyxin B (antibiotics)

Allergic reactions can range from mild to life threatening.*

mercury (thimerosal)

One of the most poisonous substances known. Has an affinity for the brain, gut, liver, bone marrow and kidneys. Minute amounts can cause nerve damage. Symptoms of mercury toxicity are similar to those of autism.

neomycin sulfate (antibiotic)

Interferes with Vitamin B6 absorption. An error in the uptake of B6 can cause a rare form of epilepsy and mental retardation. Allergic reactions can be mild to life threatening.*

phenol/phenoxyethanol (2-PE)

Used as antifreeze. Toxic to all cells and capable of disabling the immune system's primary response mechanism.

human & animal cells

Human cells from aborted fetal tissue and human albumin. Pig blood, horse blood, rabbit brain, guinea pig, dog kidney, cow heart, monkey kidney, chick embryo, chicken egg, duck egg, calf serum, sheep blood and others.

A major cause of the Roman Empire's decline, after six centuries of world dominance was its replacement of stone aqueducts by lead pipes for the transport and supply of drinking water. Roman engineers, the best in the world, turned their fellow citizens into neurological cripples. Today our own "best and brightest," with the best of intentions, achieve the same end through childhood vaccination programs yielding the modern scourges of hyperactivity, learning disabilities, autism, appetite disorders, and impulsive violence.

— Harris L. Coulter, Ph.D.
